Feet 0 1000 2000 3000 4000
Meters 0 200 400 600 800 1000 1200

See TAXI AND PARKING CHART (APRONS B, C, E & F) and TAXI AND PARKING CHART (APRONS A,D,G,H,Q&S) for holding positions, rwy guard lights and FOD fence locations.

CHANGES: Twys M9 & N3 shape.

INCURSION HOT SPOTS

(For information only, not to be construed as ATC instructions.)

- HS1 Misroute Hotspot: Potential to proceed onto RWY holding position M2 from TWY L3.
- HS2 Pilots to ensure ATC clearance to cross RWY at RWY holding position K11.
- HS3 Pilots to ensure ATC clearance to enter/cross RWY at RWY holding position N2.
- HS4 Misroute Hotspot: Pilots to ensure ATC clearance to use TWY crossover Z2.
- HS5 Misroute Hotspot: Pilots to ensure ATC clearance to use TWY crossover Z4.
- HS6 Premature turn from TWY K (Westbound) onto TXL Y (taxilane) instead of TXL J1.
- HS7 Misroute Hotspot: Potential to miss TWY crossover Z6 and proceed Westbound on TWY K.
- HS8 Misroute Hotspot: Potential to miss TWY crossover Z8 and proceed Westbound on TWY K.
- HS9 Misroute Hotspot intersection. Potential to wrongly turn onto TWY K, TXL J2, TXL W or TXL Z.
- HS10 Potential to not hold at intermediate holding position KP when instructed.

VISUAL DOCKING GUIDANCE SYSTEMS (VDGS)

1. INTRODUCTION

Parking stands are equipped with visual docking guidance system (VDGS) and hence no wing walkers/marshaller is available on the stand. If VDGS is faulty/not available, marshaling assistance would be arranged on the stand.

A pilot must inform ATC immediately, and not enter the stand if:
- Unsure of VDGS information;
- VDGS is not activated (missing vertical floating arrows);
- VDGS fails; and
- VDGS displays different ACFT type.

Upon entering the stand, the pilot must hold position and inform ATC if:
- There is a VDGS failure; or
- The ACFT has not stopped at the designated stop position.

The VDGS system is installed for the lead-in line of all stands. It displays to pilots on a large LED Board, azimuth and 'distance-to-go' information.

Pilots should follow the lead-in ground marking to initiate the turn from taxilane into the stand. The VDGS unit will be set to capture mode prior to the ACFT arrival.The capture mode will display on LED Board the ACFT type with vertical floating arrows.

In case, the vertical floating arrows are not displayed, pilot should not enter the stand and report to ATC that VDGS is not activated.

Before turning onto the stand, check if ACFT type displayed in the VDGS is correct.

Once the VDGS captures the ACFT, the display will change to tracking mode showing the relative position of the ACFT from the lead-in line (T).
A flashing red arrow on the board indicates the direction of turn to align the ACFT nose-wheel with the lead-in line of the stand.

The VDGS will display the final closing rate information in meters, which is shown 66'/20m from the STOP position and rows of light gets extinguished from 39'/12m. The closing rate is also shown graphically by gradual shortening of the (T) symbol. Slow down the ACFT speed to halt at the STOP position.

Note: Pilot must not proceed unless the vertical floating arrows have been superseded by the closing rate bar.

When the ACFT nose-wheel reaches the correct STOP position, 'distance-to-go' reading reaches zero and the 'STOP' signal and red lights are displayed on the board to halt the ACFT from any further movement.

The 'STOP' will change to an 'OK' signal on the Board to indicate the ACFT is correctly parked. If the ACFT has overshot the STOP position, 'TOO FAR' signal will be displayed on the Board.

The VDGS should be approached with MAX 2 KT.

Notes:

- Pilots must not enter an ACFT stand unless the VDGS is illuminated or a marshaller has signalled clearance to proceed.

- Pilots must not attempt to self-park if the VDGS is not illuminated or calibrated for their ACFT type.

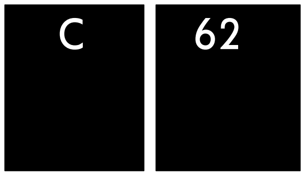
- VDGS units used at OMDB will not operate effectively below CAT III conditions (visibility down to 175m), if VDGS unit is not illuminated or failing to capture ACFT, Pilots must stop and request marshaling assistance from ATC.

VISUAL DOCKING GUIDANCE SYSTEMS (VDGS) (contd)

2. LED Board Display - When VDGS is functioning optimally

2.1. NOT SCHEDULED AND NOT ACTIVATED

- If only stand number is shown, it means VDGS is not activated.
- ACFT should not enter stand.

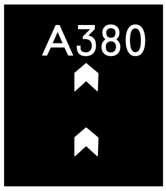


2.2. SCHEDULED BUT NOT ACTIVATED

- The ACFT is allocated to the stand and hence call sign and EIBT with countdown timer appears on the VDGS.
- However VDGS is not yet activated, as vertical floating arrows are missing.
- Report to ATC, if VDGS not activated.
- Wait for the vertical floating arrows to enter the stand.

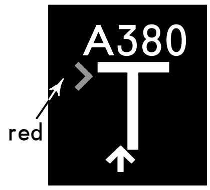
2.3. CAPTURE

- The vertical floating arrows indicate that the system is activated and is in Capture mode and searching for an approaching ACFT.
- Pilots shall check that the correct ACFT type is displayed.
- Pilot must not proceed beyond the boarding bridge unless the vertical floating arrows are superseded by yellow Closing Rate Bar.



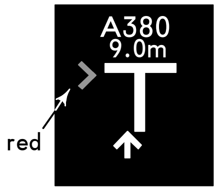
2.4. TRACKING

- When the ACFT has been caught by the laser, the vertical floating arrow is replaced by the yellow Closing Rate Bar.
- If a flashing red indicator is displayed, then this is indicating the direction of turn required to be taken to align onto the lead-in line.



2.5. CLOSING RATE (DIGITAL)

This is the digital count down from a specific distance to the final stop position.



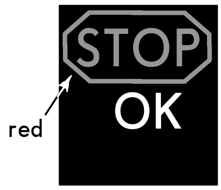
3. LED Board Display - Examples of VDGS Failures

3.1. OVERSHOOT

If the ACFT has overshot the stop-position, 'TOO FAR' will be displayed.

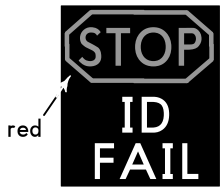
3.2. STOP SHORT

If the ACFT is found standing still but has not reached the intended stop position, the message 'STOP, OK' will be shown after a pre-configured time.



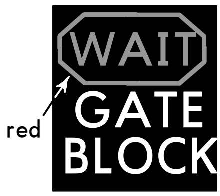
3.3. AIRCRAFT VERIFICATION FAILURE

During entry into the Stand, the ACFT geometry is being checked. If, for any reason, ACFT verification is not made 39'/12m before the stop-position, the display will first show 'WAIT' and make a second verification check. If this fails, 'STOP' and 'ID FAIL' will be displayed.



3.4. GATE BLOCKED

If an object is found blocking the approach to gate/apron view from the Safedock to the planned stop position for the ACFT, the docking procedure will be halted with a 'WAIT' and 'GATE BLOCK' message.



CHANGES: None.
