7. D North zone: 851, 852 pads

De-icing Operational Procedures

1. De-icing requests and cancellations are possible through A-CDM portal system by Aircraft Operators (AO) via radio communication with Incheon De-icing by flight crew.
2. Engine on de-icing is available on all de-icing pads and ACFT types applicable for engine on de-icing depend on AO or Ground Handling Agents (GHA).
3. Technical de-icing (landing gear, brakes, inside LE- or TE-flaps, under wing, engine inlets, fan blades and sensors/ static ports/ pitot probes) should be performed by Engine off.
4. For safety and GHA's operational reasons (weather conditions, etc.), engine off de-icing can be applied.
5. On the de-icing pads ACFT shall hold abeam the stop line which indicates the cockpit stop position or follow advice of the marshaller.
6. Aircrew shall control the throttle carefully, avoiding the exhausted gas causing damage to support personnel and equipment, when aircraft exit the de-icing stands.
7. During the engine on de-icing, aircrew shall keep the engine idle and set the brake. ACFT hold position until Pad control give the taxi instruction.
